Daniel Zhang (張道博)	The test is likely accessing both databases. It should only access the testing database.

MSG-164 — concise logs are not showing meaningful values for duplicates during insert
See [#MSG-160](#).

MSG-180 — fix missing readings not inserted during secondary loading

Daniel Zhang (張道博)	An isolated test using test data:
13 Jun 2013 18:35	
	meco_v3-energy-test-data_with_missing_interval.xml.gz
	meco_v3-energy-test-data.xml.gz

resulted in all readings being inserted.

Results with actual data cannot be confirmed yet. The attachment shows a discrepancy between secondary loading to meco_v3 versus primary loading to meco_v4.

Daniel Zhang (張道博) 21 Jun 2013 17:03	A selection of readings with counts of 12 & 24 are identified as not being dupes. They have been loaded to the DB.
Daniel Zhang (張道博) 21 Jun 2013 23:34	Reading counts are matching dupe counts exactly during insert but actual DB data is different between v3 and v4 where v3 contains 2013-Mar data from the original export and the re-extracted export and v4 contains only the re-extracted export.
Daniel Zhang (張道博) 22 Jun 2013 00:37	Attachment shows difference in DB.
Daniel Zhang (張道博) 22 Jun 2013 01:33	Loading 2013-Mar original data to v4 results in the reading/meter counts matching indicating the re-extracted data has less readings than the original+re-extracted. No missing readings are detected as a result of loading.

MSG-209 — reading/meter plots appear to have doubled plotting

Task

MSG-1 — setup test XML source data for test____mecoxmlparser.py

MSG-4 — perform dupe check prior to insertion

Daniel Zhang (張道博)	dupe checking on meter name and interval end time works but there exists
21 Mar 2013 17:44	duplicate channel data in the raw data

MSG-5 — have meter data, meter IDs, be unique

Daniel Zhang (張道博)	meter ids should be recorded once and only once
15 Mar 2013 16:05	

Daniel Zhang (張道博)	this may not be necessary
21 Mar 2013 17:44	

MSG-6 — insert test data to test_meco database

Daniel Zhang (張道博)	insert of testing data works fine
15 Mar 2013 16:04	

MSG-7 — reduce static test data set

MSG-8 — setup insert test data for dupe check test

Daniel Zhang (張道博)	The same sample data used for the parser test is being used by the dupe check
17 Apr 2013 13:25	test.

MSG-9 — determine how to dupe check when parsing data

Daniel Zhang (張道博)	dupe checking can be accomplished by referencing the meter data id and the
20 Mar 2013 16:39	end_time (reading branch) or the read_time (register branch)

MSG-10 — determine where to rollback or stop a commit when a dupe is present

Daniel Zhang (張道博)	currently, the end of the reading branch is the commit point.
21 Mar 2013 08:16	
	does this need to be implemented to explicitly handle the register branch?

MSG-11 — intercept duplicate channel data

Daniel Zhang (張道博)	there appear to be duplicates of reading data in the raw data. these need to be
22 Mar 2013 16:44	intercepted and prevented from being inserted into the database.

Daniel Zhang (張道博) 22 Mar 2013 16:46	using a combined meterName-IntervalEndTime-channel field is possible to ensure data integrity.
Daniel Zhang (張道博) 25 Mar 2013 01:47	the reading branch is covered for duplicates now.

MSG-13 — add additional check to verify that duplicate rows to be discarded have equivalent data in the database

Daniel Zhang (張道博) 25 Mar 2013 01:44	Commit made by Daniel Zhang on 2013-03-25T04:40:24-07:00 https://github.com/Hawaii-Smart-Energy-Project/Maui-Smart-Grid/commit/fbff88b9cc88d4d814b34de737d45add9d7aa0c4 changing dupe handling method, focusing on reading branch: #MSG-13 In Progress
Daniel Zhang (張道博) 25 Mar 2013 01:49	removed rollback when dupes are present. testing on meterName-endTime-channel is lower level than meterName-endTime.
Daniel Zhang (張道博) 25 Mar 2013 11:07	Commit made by Daniel Zhang on 2013-03-25T14:07:15-07:00 https://github.com/Hawaii-Smart-Energy-Project/Maui-Smart-Grid/commit/fe29ca7966c091c0deb2ea06a9884b5d52c881c7 typecasting for equality checks works; disabling rollback on dupes: #MSG-13 Fixed

MSG-14 — check for duplicates on the register branch

MSG-15 — stop rolling back for duplicates, rely on three-element unique identifier (meter name, end time, channel) instead

MSG-16 — write equality verification test when dropping reading data due to duplication

Daniel Zhang (張道博) 17 Apr 2013 13:24	This has been accomplished in test____mecodupecheck.py.
Daniel Zhang (張道博) 17 Apr 2013 15:18	An equality check is performed during insertion of data and a separate test is not needed.

MSG-17 — move debug option to local config

Counts are calculated by the the view countOfReadingsByDay. A discontinuity of 15-minutes or 1 interval seems to appear at the beginning of each data set. Reading counts appear to be as expected, 96/day, at other times. The meter counts are not as expected. The latest MeterRecords indicate 92 meters.

DB connection method has been stable and sufficient.

MSG-118 — re-verify reading counts

The following check is evaluating to true unexpectedly:

```
self.configer.configOptionValue("Debugging", "limit_commits")
```

Load counts should be re-checked with this check removed.

Logging configuration, including that of providing notice for testing mode, is handled on a class-by-class. Therefore, issues related to logging should address specific classes.

MSG-157 — fix problem where recursive insert immediately terminates upon finding duplicate data

Daniel Zhang (張道博)
03 Jun 2013 17:03

Tail of the insert log is:

```
SQL execute was successful.  
table name = Interval  
column name = interval_id  
SQL execute was successful.  
SQL execute was successful.  
Duplicate meter-endtime-channel exists.  
SQL execute was successful.  
table name = Reading  
column name = reading_id  
SQL execute failed using select  
curval(pg_get_serial_sequence("Reading",'reading_id')).  
The error is: curval of sequence "reading_id_seq" is not yet defined in this  
session
```

Daniel Zhang (張道博)
04 Jun 2013 14:02

If a dupe is encountered before a reading_id is generated, as in the first MeterData set, then this error can occur.

<https://github.com/Hawaii-Smart-Energy-Project/Maui-Smart-Grid/commit/f14ec17b02749b7b8dbfeb8bb16a1332c6812f7f>

adding view readings_with_pv_service_point_id: #MSG-250 fixed

- Corrected dz_energy_voltages_for_houses_without_pv view.
- Changed col name in PVServicePointIDs.
- Updating DB.
- Needs further cleanup to remove unused added views.
